

National Immunization Program Aspects on Security Confidentiality and Privacy

**Gunther Schadow
Clem McDonald**

Regenstrief Institute for Health Care

Atlanta, GA, Junly 31, 1998

Assets and Risks

- **What information will be stored?**
 - Immunization record (not the whole medical record, not even its core)
 - Patient index data (name, DOB, genealogy, SSN, UHI, etc.)
 - Patient demographics (address, phone number)
- **What is at risk?**
 - The immunization record is probably the least interesting information although it may sometimes allow inferring an impaired health condition or a likely diagnose.
 - The index may be a directory to unlock other sources of data, or for simple SSN fraud.
 - Patient demographics is of tremendous value, attempts will be made to exploit this commercially, criminally and for law enforcement.
- ➔ **The credibility of the NIP is at risk.**
- ➔ **Separating out the core data may not help much.**

Confidentiality of Information

- **A Policy has to be in place to regulate who may access what information about whom (rules).**
- **Access rights have to be determined for each transaction request (decision).**
- **Information in transit must be encrypted to deny general read access to eavesdroppers.**
- **System integrity and operation must be maintained and information loss prevented.**

Policy

- **Define roles:** both human and process roles.
Human Roles: Patient, Doctor, System administrator.
Process Roles: Provider IS, Registry, Index, Birth registry.
- **Define data:** use modeling tools to visualize.
Provider, Patient, Immunization, Vaccine, Reaction.
- **Define transactions:**
What objects are involved?
What objects are affected?
- **Define which transactions may be initiated by which roles.**

Authorization

- **Who is the initiator?**

 - **Identification: design the namespace in which identifiers are meaningful.**

 - **Authentication: apply technology to assure the integrity of identification information.**

- **What are the rights of that initiator?**

 - **Authorization:**

 - 1. **Role based (absolute rights)**

 - **Every doctor may retrieve every immunization record.**

 - 2. **Subject based (relative rights)**

 - **The doctor of patient X may retrieve the record of patient X.**

- **Passwords:** most commonly used, easily implemented
Password can be guessed, stolen, and intercepted

PASSWORDS ARE BAD

- **One-time passwords:** e.g. Kerberos, S/Key
 - ✦ Guessing is very hard, intercepting makes little sense
 - Require the user to keep a device or a list of passwords, subject to theft, or again interceptable initial passwords.
- **Digital signature:** similar to challenge-response method.
- **Certificate exchange:** e.g. used by SSL and secure MIME.

- **A certificate is a name and a public key signed by someone else.**
- **Senders and receivers have to trust the one who issued the certificate.**
- **Certificate issuing is crucial to security ...**
 - It is paramount to trust the certificate issuer!**
- **... certificate distribution is not security relevant.**
 - You can accept certificates from everywhere as long as you trust the signature on it.**

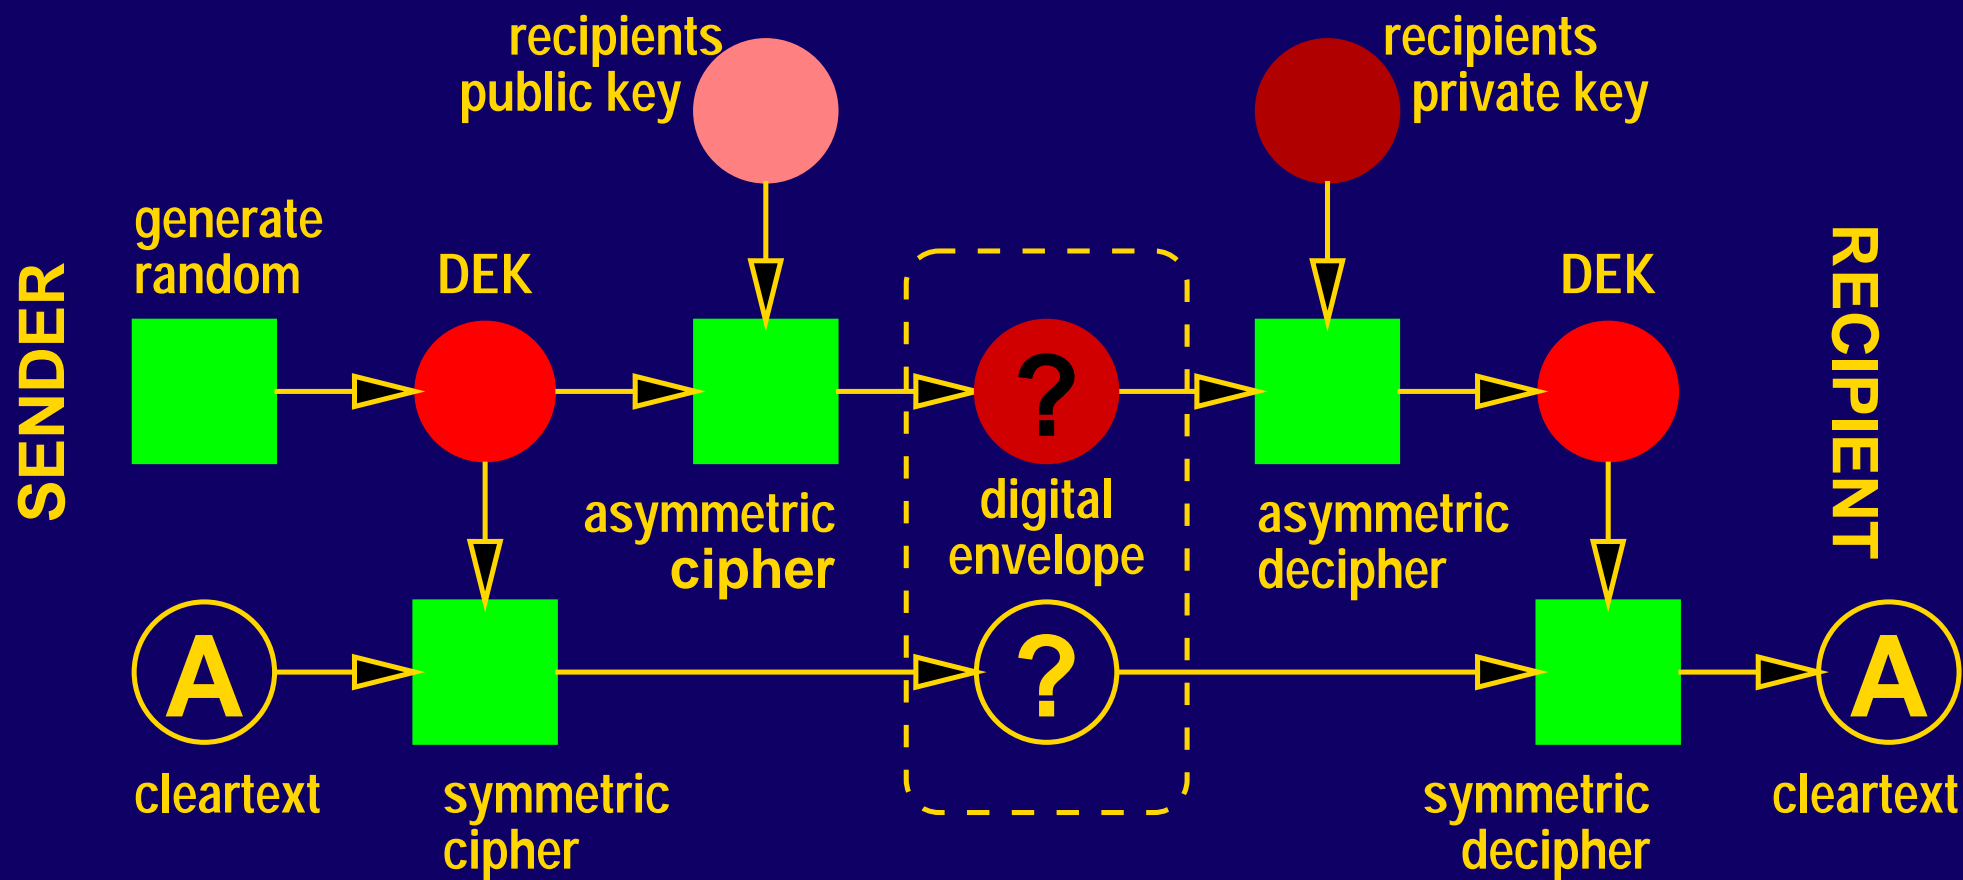

- Impact of the virtual network topology:

➔ Hierarchical organization reduces complexity!

Encryption

- All patient data in transit must be encrypted.
- The digital Envelope:

Site Security

- **Firewalls should protect all immunization record and index systems connected to public networks.**
 - Also holds for servers on telephone lines (dialup servers).
 - Firewalls are separate machines that provide no other services.
 - Packet filters are not enough, application layer gateways preferred.
 - Only sites that can run a firewall properly should act as servers.
- **Encryption of data on site is not required if physical protection is made sure.**
- **Only strong SmartCard based authentication to log in on sites. No passwords!**
- **Rigorous backup scheme, disaster plans.**

Privacy

- **We should regard the patient (or his legal guardian) as the owner of his record.**
- **The patient, not the doctor, has to decide whether his immunization record is kept, updated, or communicated.**
- **The patient has a right to see his complete record.**
But how do we authenticate patients?
- **Maintain a clear scope how patient data is used.**
Do not break a promise: do not permit use for other purposes.
- **Keep the public informed, establish public control mechanisms.**

Open Issue

How can we make sure that only a doctor who actually takes care of a given patient can retrieve this patient's record?

- **There is no strong association between patients and physicians.**
- **Patients could carry an authenticator token - but why not let them carry the record in the first place?**

the 1990s, the number of people with a mental health problem has increased in the UK. In 1990, 1.5 million people were estimated to have a mental health problem, compared with 2.5 million in 2000 (Mental Health Foundation, 2002).

There is a growing awareness of the need to improve the lives of people with mental health problems. The UK Government has set out a strategy for mental health care in the 2005 White Paper, *Mind the Gap: Our Mental Health Strategy* (Department of Health, 2005). The strategy is based on the following principles:

- People with mental health problems should be treated as individuals, with their own needs and wishes.
- People with mental health problems should be given the opportunity to participate in decisions about their care.
- People with mental health problems should be given the opportunity to live their lives in the community.

The strategy also sets out a number of key objectives for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.

The strategy also sets out a number of key actions for the mental health system:

- To improve the lives of people with mental health problems.
- To reduce the stigma and discrimination against people with mental health problems.
- To improve the effectiveness of mental health services.
- To improve the safety of mental health services.
